

Chapter 2 Mind Bender

You have two buckets, a 5 gallon bucket and a 3 gallon bucket. The buckets do not have any measuring marks on them. You have an endless supply of water to fill the buckets up with and you can also empty the buckets as much as you like. Describe, step by step, in words or using diagrams, the process for measuring exactly 4 gallons.

***** You are encouraged to discuss the problem with others, but don't yell out the answer.**
