## Section 7.6-Law of Sines and Cosines

## Area of a Triangle

The area of any triangle is given by one-half the product of the length of two sides times the sine of their included angle. For $\triangle \mathrm{ABC}$ shown, there are three ways to calculate the area.

Area $=\frac{1}{2} \mathrm{bc} \sin \mathrm{A} \quad$ Area $=\frac{1}{2} \mathrm{ac} \sin \mathrm{B} \quad$ Area $=\frac{1}{2} \mathrm{ab} \sin \mathrm{C}$

## Ex 1:

Find the area of the triangle. Round your answer to the nearest tenth.

## Law of Sines

The Law of Sines can be written in either of the following forms for $\triangle A B C$ with sides of length $a, b$, and $c$.

$$
\frac{\sin A}{a}=\frac{\sin B}{b}=\frac{\sin C}{c} \quad \frac{a}{\sin A}=\frac{b}{\sin B}=\frac{c}{\sin C}
$$

## Ex 2:

Solve the triangle. Round decimal answers to the nearest tenth.
Note: Solving a triangle means to find all the missing angle measures and side lengths.

In $\triangle \mathrm{ABC}$ has sides of length $\mathrm{a}, \mathrm{b}$, and c , as shown.

## Standard Form

$$
\begin{array}{ll}
\mathrm{a}^{2}=\mathrm{b}^{2}+\mathrm{c}^{2}-2 \mathrm{bc} \cos \mathrm{~A} & \cos \mathrm{~A}=\frac{\mathrm{b}^{2}+\mathrm{c}^{2}-\mathrm{a}^{2}}{2 \mathrm{bc}} \\
\mathrm{~b}^{2}=\mathrm{a}^{2}+\mathrm{c}^{2}-2 \mathrm{ac} \cos \mathrm{~B} & \cos \mathrm{~B}=\frac{\mathrm{a}^{2}+\mathrm{c}^{2}-\mathrm{b}^{2}}{2 \mathrm{ac}} \\
\mathrm{c}^{2}=\mathrm{a}^{2}+\mathrm{b}^{2}-2 \mathrm{ab} \cos \mathrm{C} & \cos \mathrm{C}=\frac{\mathrm{a}^{2}+\mathrm{b}^{2}-\mathrm{c}^{2}}{2 \mathrm{ab}}
\end{array}
$$

Important: Use the Law of Cosines to find the largest angle measurement. Do not apply the Law of Sines until you have found the largest angle measurement. Always use the largest angle measurement when applying the Law of Sines.

## Ex 3:

Solve the triangle. Round decimal answers to the nearest tenth.
