## Geometry Note-Taking Guide

Name: $\qquad$
Period: $\qquad$

## Section 8.1 - Find Angle Measures in Polygons

We know the sum of the interior angles of a triangle is $180^{\circ}$. You can determine the sum of the interior angle measures of any polygon by dividing it into triangles.

Quadrilateral

Pentagon

Hexagon

| Polygon | Number of Sides | Number of Triangles | Sum of Measures <br> of Interior Angles |
| :--- | :---: | :---: | :---: |
| Triangle (3-gon) | $\mathbf{3}$ | $\mathbf{1}$ | $\mathbf{1 \cdot 1 8 0}^{\circ}=\mathbf{1 8 0}^{\circ}$ |
| Quadrilateral (4-gon) |  |  |  |
| Pentagon (5-gon) |  |  |  |
| Hexagon (6-gon) |  |  |  |
| n-gon |  |  |  |

## Polygon Interior Angle Sum Theorem

The sum of the measures of the interior angles of a n-gon is $\qquad$ .

## Ex 1:

b) Find $m \angle D E A$.

## Finding Each Polygon Interior Angle Measure

The measure of each interior angle of a regular n -gon is $\qquad$

## Ex 2:

a) Determine the measure of each interior angle of a regular pentagon.
b) The measure of each interior angle of a regular polygon is $120^{\circ}$. How many sides does the polygon have? What is the name of the polygon?

## Polygon Exterior Angles Sum Theorem

The sum of the measures of the exterior angles of a polygon is $\qquad$ .

## Ex 3:

Find the value of the variable.

Note: The figure below is a regular octagon.
b)

Finding Each Polygon Exterior Angle Measure
The measure of each exterior angle of a regular n-gon is $\qquad$

## Ex 4:

a) Find the measure of each exterior angle of a regular decagon.
b) The measure of an exterior angle of a regular $n$-gon is $72^{\circ}$. How many sides does the polygon have? What is the name of the polygon?
