## Geometry Note-Taking Guide

Name: $\qquad$
Period: $\qquad$

## Section 8.4 - Trapezoids and Kites

A $\qquad$ is a quadrilateral with
exactly $\qquad$ pair of parallel sides.

The parallel sides, $\overline{\mathrm{AB}}$ and $\overline{\mathrm{DC}}$, are the $\qquad$ .

A trapezoid has two pairs of $\qquad$ .
$\qquad$ and $\qquad$ are one pair of base angles.

Note: Label Diagram
$\qquad$ and $\qquad$ are the other pair of base angles.

The nonparallel sides, $\overline{\mathrm{AD}}$ and $\overline{\mathrm{BC}}$, are the $\qquad$ of the trapezoid.

If the legs of a trapezoid are congruent, then the trapezoid is an $\qquad$ .

## Isosceles Trapezoid Base Angles Theorem

If a trapezoid is isosceles, then each pair of base angles is congruent.
$\angle \mathrm{A} \cong \angle \mathrm{B}, \angle \mathrm{C} \cong \angle \mathrm{D}$

## Ex 1:

Find the angle measures of trapezoid JKLM.

b)

c)

$\mathrm{m} \angle \mathrm{J}=$ $\qquad$ $\mathrm{m} \angle \mathrm{L}=$ $\qquad$
$\mathrm{m} \angle \mathrm{K}=$ $\qquad$ $\mathrm{m} \angle \mathrm{M}=$ $\qquad$
$\mathrm{m} \angle \mathrm{J}=$ $\qquad$ $\mathrm{m} \angle \mathrm{K}=$ $\qquad$ $\mathrm{m} \angle \mathrm{L}=$ $\qquad$

A $\qquad$ of a trapezoid is the segment that connects the midpoints of its legs.

## Midsegment Theorem for Trapezoids

The midsegment, MN , of a trapezoid is parallel to each base and its length is one half the sum of the lengths of the bases.

$$
\mathrm{MN}=\frac{1}{2}\left(\text { base }_{1}+\text { base }_{2}\right) \quad \text { or } \quad \mathrm{MN}=\frac{1}{2}(\mathrm{AD}+\mathrm{BC})
$$

## Ex 2: Solve for $x$.

b)

c)

A $\qquad$ is a quadrilateral that has two pairs of consecutive congruent sides

## Properties of a Kite

| If a quadrilateral is a kite, then |
| :--- | :--- | :--- |
| its diagonals are perpendicular. | | If a quadrilateral is a kite, then |
| :--- |
| exactly one pair of opposite angles |
| are congruent. | | One diagonal of a kite, bisects |
| :--- |
| the other diagonal and one |
| diagonal bisects the pair |
| of non-congruent opposite angles. |

Ex 3: JHGK is a kite. Find the indicated measurement.
